

FOR IMMEDIATE RELEASE

Rebit™ Earns Computer Times Editor's Choice Award

LONGMONT, Colorado
July 28, 2009

Rebit Inc., the company dedicated to relieving the burden of backup for PC users, today announced that it has been selected as "Editor's Choice Storage Device" by Computer Times. All of the Rebit appliances and software CDs currently available are included in the award selection.

Rising above the competition, the review stated that Rebit products "provide consumers with a unique backup solution that out strides other companies by a mile." The review focused on Rebit's ability to back up and recover a PC's entire Operating System. "Just think about how much time and money it would cost to rebuild a crashed computer from scratch, reloading the OS, repurchasing software, spending hours reconfiguring your preferences, registering products with license keys you only hope you kept. And this is all before reloading the personal files that your other backup products so graciously saved for you. Rebit gives you all of this in one easy step, by saving your entire system, or systems, completely, and in one place."

"It is gratifying to see that the Rebit appliances and software have been acknowledged and selected by Computer Times as their Editor's Choice in the Storage Device category," said Charlene Murphy, executive vice president of sales and marketing, Rebit Inc. "This recognition validates our dedication to simplicity-of-use and celebrates the accomplishments of Rebit's entire team."

"This genius little appliance is always looking out for you and your files," commented Angie Kibiloski, entertainment editor, Computer Times, who reviewed the Rebit products. "If you want easy, effortless, constant, and complete backup, Rebit is the obvious choice."

The award-winning Rebit backup and recovery is so simple, it actually gets used. Rebit's single and multi-PC software CDs allow a user to convert any USB drive to a Rebit appliance. Rebit provides complete and continuous backup of Windows-based computers. Unlike competing products that only copy data, Rebit also protects applications, individual settings, and the entire operating system. It even maintains multiple versions of files as they change. In the event of a complete hard drive failure, a virus, or just the accidental deletion of a file, Rebit provides painless recovery using the familiar "drag and drop" feature of Windows Explorer. Rebit software CDs and appliances are available to computer retailers and resellers through ASI Computer
